MAJOR SPONSORSHIP PROPOSAL & \$100K-\$250K PARTNERSHIP ARCHITECTURE

Flagship Partnership Structure for the Student Impact Challenge

Purpose: Define a flexible architecture for major corporate partnerships so the team can explain what a \$100,000, \$150,000 or \$250,000 investment is designed to enable, how a sponsor can participate, what can be measured, and how proposals should be customized by industry.

Core principle: A major corporate partnership is not a logo package. The investment must connect to real program needs, student opportunity, meaningful corporate participation and measurable deliverables that the program can actually fulfill.

THE COMPANY IS NOT BUYING A BIGGER LOGO. IT IS INVESTING IN A BIGGER, BETTER-DEFINED IMPACT.

1. THREE MAJOR PARTNERSHIP LEVELS

Level	Investment	Designed To Enable	Partnership Character
Founding Impact Partner	\$250,000	Flagship support for a major program priority or multi-component student impact initiative.	Executive engagement; major approved activation; employee involvement; prominent approved recognition; comprehensive reporting.
Leadership Impact Partner	\$150,000	Substantial support for a defined student/community impact component.	Student/community activation; employee engagement; approved recognition; impact reporting.
Major Impact Partner	\$100,000	Meaningful support for a defined program component or student opportunity.	Targeted activation; approved recognition; employee/subject-matter engagement; measurable reporting.

2. WHAT A MAJOR INVESTMENT MAY ENABLE

The exact allocation must be based on the approved program budget. A proposal may combine several modules below rather than promising a fixed use that has not been budgeted.

Module	Examples of Legitimate Use
Student Scholarships & Awards	Cash scholarships, prizes or approved educational awards tied to program rules.
Student Access & Participation	Program materials, registration support, outreach, accessibility and participation infrastructure.
Career & Workforce Experiences	Career panels, workplace exposure, mentorship, skills workshops and approved experiential learning.
Entrepreneurship & Financial Skills	Business problem-solving, financial capability, entrepreneurship education and mentor engagement.
AI / STEM / Digital Skills	Responsible AI literacy, technology learning, STEM exposure and digital-skills programming.
Community Problem-Solving	Student projects focused on real local business/community challenges.
Teacher & School Engagement	Teacher resources, school participation support and approved recognition/experiences.
Finalist / Winner Experiences	Approved travel, events, mentorship, professional exposure and recognition.
Measurement & Reporting	Participation tracking, activation reporting, surveys and sponsor impact reporting where feasible.
Program Operations	Staffing, technology, compliance, communications and delivery necessary to operate the sponsored component.

3. PARTNERSHIP BENEFIT ARCHITECTURE

Benefit Area	Possible Structure
Recognition	Approved logo/name recognition on selected program materials, website, event assets or sponsor acknowledgments.
Thought Leadership	Executive participation in an approved panel, workshop, career conversation or educational session.
Employee Engagement	Mentors, judges, volunteers or subject-matter experts, subject to program rules and screening where applicable.
Student Experience	Approved educational/career experiences connected to the sponsor's field.
Community Activation	Sponsor-supported student/community event or educational activation.
Content	Approved sponsor acknowledgment, impact storytelling and program-generated recap content.
Impact Reporting	Agreed metrics and narrative reporting that the program can reliably produce.
Hospitality / Events	Approved attendance or participation in program events where capacity and rules permit.

4. LEVEL-BY-LEVEL ARCHITECTURE

Feature	\$250K Founding Impact	\$150K Leadership Impact	\$100K Major Impact
Program Scope	Flagship / multi-module	Major defined component	Defined component
Executive Engagement	High-value strategic role	Selected executive role	Targeted participation
Employee Engagement	Multi-touch where useful	Defined activation	Optional targeted activation
Recognition	Highest approved level	Strong approved level	Major approved level
Custom Activation	1 major customized concept	1 defined activation	Targeted activation
Impact Report	Comprehensive agreed report	Major partnership report	Defined impact report
Planning Reviews	Executive kickoff + milestones	Kickoff + milestone review	Kickoff + closeout
Industry Customization	Extensive	Strong	Focused

Benefits are not automatically cumulative or unlimited. Each proposal should list the exact approved deliverables for that sponsor, including quantity, timing, location and responsible owner where possible.

5. INDUSTRY-SPECIFIC PARTNERSHIP MODULES

Industry	Strongest Activation Themes
Banking / Payments	Financial capability, entrepreneurship, local-business learning, digital commerce, career exposure.
Technology / AI	Responsible AI, coding/STEM, digital skills, innovation, future workforce, technology access.
Healthcare / Pharma	Healthcare careers, community health education, STEM/science exposure, workforce pathways.
Insurance	Financial resilience, risk awareness, careers, community preparedness and economic security.
Airlines / Travel / Hospitality	Career exposure, travel experiences, hospitality/aviation pathways, winner/teacher experiences.
Retail / Consumer Brands	Community activation, product/category learning, workforce skills, family/community support.
Professional Services	Mentoring, consulting/business skills, career readiness, financial/business education.
Media / Entertainment	Storytelling, media careers, content creation, digital creativity and communications skills.
Automotive / Mobility	STEM, mobility, engineering, transportation careers, safety education.
Utilities / Energy	STEM, sustainability, clean-energy careers, resilience and community education.
Sports / Apparel	Youth leadership, wellness, teamwork, career exposure and experiences.

6. EXAMPLE: \$150K TECHNOLOGY PARTNERSHIP

Working concept: “Future Problem-Solvers & AI Skills Initiative.” The company supports a defined Challenge component helping students understand responsible AI, digital problem-solving and future workforce skills. Possible activation includes an expert session, student resource, employee mentors, finalist experience and an agreed impact report. The proposal must specify actual deliverables and approved participant scope before commitment.

7. EXAMPLE: \$150K FINANCIAL SERVICES PARTNERSHIP

Working concept: “Young Entrepreneurs & Financial Capability Initiative.” The sponsor supports students learning how businesses operate, understanding financial decision-making and developing practical solutions for community businesses. Possible activation includes financial-literacy sessions, employee mentors, entrepreneurship resources and a student experience tied to the sponsor’s expertise.

8. EXAMPLE: \$100K HEALTHCARE PARTNERSHIP

Working concept: “Future Healthcare Problem-Solvers.” The sponsor supports student exposure to healthcare careers and community-health problem solving. Possible activation includes career conversations, STEM/health education, employee volunteers and an approved finalist experience. No patient data, medical advice or clinical access should be implied.

9. EXAMPLE: \$250K FOUNDING IMPACT PARTNER

A \$250K Founding Impact Partner should have a clearly larger role because the investment enables a clearly larger program scope—not because the sponsor receives unlimited marketing. The proposal may combine student awards, a statewide skills initiative, employee engagement, a signature activation and enhanced impact measurement. The exact package must be customized after discovery.

10. THE PROPOSAL STRUCTURE

Section	Purpose
Cover	Sponsor name + Student Impact Challenge + proposed partnership title.
1. Executive Summary	Why this partnership makes strategic sense now.
2. The Challenge	Concise explanation of program, participants and student journey.
3. Why [Company]	Current verified alignment—not generic praise.
4. Partnership Recommendation	Specific investment level and customized initiative.
5. What It Enables	Budget-linked modules and outcomes.
6. Sponsor Activation	Exact approved engagement/recognition.
7. Timeline	Decision, kickoff, activation, milestones and reporting.
8. Measurement	Metrics that can actually be tracked.
9. Investment	Cash amount; in-kind shown separately.
10. Next Step	Decision process, contact and proposed next meeting.

11. MEASUREMENT MENU

Metric Area	Potential Measurement
Participation	Registered/eligible/active/completed participants, only when accurately available.
Schools / Communities	Verified participating schools, municipalities or communities.
Projects	Verified student interviews, problems identified, solutions or submissions.
Engagement	Attendance at sponsored workshops, panels, mentorship or experiences.
Skills	Pre/post survey or self-reported learning where the methodology is approved.
Career Exposure	Number of students participating in approved career experiences.
Awards	Scholarships/prizes actually awarded through approved program rules.
Content / Digital	Program-controlled views, clicks, registrations or engagement where reliable.
Sponsor Volunteers	Verified employee participation and hours where tracked.
Stories	Approved qualitative examples and testimonials with appropriate consent.

12. WHAT NOT TO PROMISE

- Guaranteed independent media/editorial coverage.
- Unapproved celebrity appearances, meetings or endorsements.
- Student/parent personal data as a sponsor benefit.
- Guaranteed sales, customer acquisition or business leads.
- Exclusivity without a defined category, scope, term and approval.
- Participation, impressions or outcomes that have not been validated.
- Tax deductibility or legal treatment without proper review.
- Unlimited logo placement, events, content or employee access.
- Access to minors without required supervision, consent and program safeguards.

13. CASH VS. IN-KIND

Cash and in-kind contributions must be documented separately. A \$100,000 cash sponsorship plus \$50,000 of useful verified in-kind support may be described as a broader partnership value when appropriate, but the cash campaign should still report \$100,000 cash—not \$150,000 cash.

14. CUSTOMIZATION RULE

Never send the exact same \$150K proposal to a bank, airline, technology company and healthcare system. The core program can remain consistent, but the initiative name, business rationale, activation, employee engagement, measurement and supporting story should reflect what was learned in discovery.

15. INTERNAL APPROVAL CHECKLIST

- Investment level and cash/in-kind treatment are clear.
- Program budget can support what is promised.
- Every sponsor benefit is approved and deliverable.
- All participation/reach numbers are current and sourced internally.
- Student privacy/safety implications have been reviewed.
- Exclusivity/naming/media terms are escalated where applicable.
- Measurement plan has a responsible owner.
- Proposal reflects discovery notes and current corporate priorities.
- Payment/agreement pathway is identified.
- CRM has decision-maker, next action and target decision date.

16. SAMPLE PARTNERSHIP RECOMMENDATION LANGUAGE

“Based on our conversation, we recommend that [Company] join the Student Impact Challenge as a Leadership Impact Partner with a \$150,000 investment supporting the [custom initiative]. The partnership would focus on [two or three agreed priorities] and include [approved activation]. We would measure the partnership through [agreed metrics] and provide a defined impact report following the activation period.”

17. ARCHITECTURE PRINCIPLE

The investment level should determine the scale of impact and partnership work—not the amount of hype. The strongest major sponsor proposal makes the executive understand exactly why the company fits, exactly what the money enables, exactly how the organization can participate and exactly how the results will be documented.

NEXT DOCUMENT

Document 48 - Corporate Proposal Customization System. This should turn the architecture in Document 47 into a repeatable workflow that lets the team build a tailored proposal for JPMorganChase, Microsoft, Google, Verizon, PepsiCo and other prospects without rebuilding the proposal from zero each time.
